Please respond to Sivaji B
<maridi_andhra@yahoo.com>

Kindly find the inputs below:

Best Available techniques:

- In the field of dentistry some mercuric compound separators should be developed and ensure safe disposal.
- Biomedical waste containing mercury shall be segregated at source strictly and disposed separately in environmentally friendly manner.
- Residual from pharma industries using and generating mercury shall be disposed safely.
- Proper systems and regulations should be put in force to identify the mercury emissions.

Best Environmental Practices:

- Minimize the usage of mercury shall be implemented in all necessary stages.
- Identify the sources of mercuric emissions and shall be isolated from the human habitation and environment.
- Proper preventive measures shall be implemented strictly to reduce mercuric emissions.
- Safe disposal of mercury shall be developed in cost effective manner.
- Trading of mercury shall be restricted and should be limited to only few industries.
- Herbal products or supplements should be encouraged and reduce the usage of mercury.

Thanking you,

Maridi Eco Industries (Andhra) Pvt Ltd.
